

# BLACKMORE AIZATSURUDOI A015 (AI)

HB: BYWFA0015 Born: February 1, 2005 Sex: Male DNA: 80226

**91.5% TAJIMA**

Blackmore Aizatsurudoi A015 is a line bred bull of the Tajima bloodline. He has a unique combination of two of Japan's great sires in Tanifukudo (double bred) and Shigeshigenami. It is said that Tanifukudo now appears in the pedigree of 50% of all bulls currently in A.I. use in Japan today. Blackmore Aizatsurudoi A015's sire and great grand sire is a son of Tanifukudo being Kikutsurudoi TF146. TF146 himself is a line bred bull to the most famous cow in Japan, Kikutsuru (known as the Hyogo cow) who is credited for having the single most influence in increasing frame and size in Tajima blood cattle. Taking advice from Japan's great breeders who quote "when you use an outcross bull to breed a super sire, then that bull should be a line bred bull", we selected Itoshigenami TF148 (Tajima line – Kumanami strain) himself a line bred bull to Shigeshigenami and his sire Shigekanenami. Our carcass data has proven that TF146 and TF148 are two of the best and most consistent bulls in increasing size in the cube roll and strip loin (the two most expensive cuts). Size in this area translates into strength and constitution in breeding females and with the good milking characteristics from TF146 and TF148 the resultant females will make ideal brood cows, especially when Blackmore Aizatsurudoi A015 is bred to dams sired by Itoshigefuji TF147, Itozurudoi TF151 and Itohana 2.
